

main.c

Output

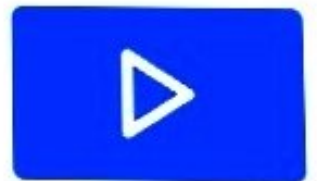

```
1  #include <stdio.h>
2
3  void main() { // main cof in original
4      int n, sum = 0; // oi in original
5      printf("Enter n:");
6      scanf("%d", &n);
7      while (n > 0) {
8          sum = sum + (n % 10); // sum=Sum
9                                // +(n/10); in original -
                                // corrected to % for digits
10         n = n / 10; // = n/10; in original
11                                // - corrected for completeness
12     }
13
14     // Output is shown before this line in
15     // the original, corrected position
16     // here
17     // Enter n: 123
18     // 6.
19
20     printf("sum of the digits = %d", sum);
21 }
22
```

Run

main.c

Output

```
Enter n:3
```

```
Sum of the digits = 3
```
